Spirit Select® bed

It’s about confidence. You know this bed is the answer as soon as your first patients use it. Yes, it’s easy to use and efficient, but more importantly, it’s built around fall prevention. You may have experienced a patient’s fall and have felt the guilt of not preventing their injury. The Spirit Select Bed’s innovative technology, along with fall prevention protocols, can help equip your staff with the tools they need to best care for their high fall-risk patients. If your patient does get out of bed and fall, the low height of the bed can help lessen the impact of the fall. Spirit Select features help with:

- **Fall prevention**
- **Ease of use**
- **Patient/Caregiver safety**

Additional features

- **120 V outlet**
- **Battery backup**
- **Nurse reminder**
  Timed and visual protocol reminder, to help remind you when it’s time to perform certain duties such as patients turns at set time intervals.
- **Auto contour**
  As the head of bed raises, the knee automatically catches, to keep the patient in place and reduce boosting.

### Integrated scale

- **10.75-inch low height**
  Can help reduce injury when falls do occur and ensures the bed can be at the right height for a wide range of patients entering and exiting the bed.

- **Obstruction sensor**
  Stops beds from lowering onto an obstruction, protecting equipment, you and your patient.

- **Automatic nightlight**
  Underbed light turns on automatically when the patient exits the bed, illuminating the floor.

- **Bed exit alarm**
  The one-zone, one-touch fall prevention alarm takes the guesswork out of setting the bed exit alarm.

- **Auto rearm**
  Turns on the alarm automatically when a patient reenters the bed.

- **Auto reset**
  Turns off the alarm automatically when the patient is in the center of the bed.

- **Watchdog Bed Monitoring System**
  Constantly monitors parameters of the bed and gives you a lighted notification when anything changes. Designed to help maintain safe bed positioning.

**High siderails**

**Removable litter deck**

**Integrated scale**

Keeping mother and baby close and providing a family-centered experience is an important initiative in postpartum units across the country. New moms are often encouraged to breastfeed, and have as much skin-to-skin contact as possible. There are many health benefits of closeness. It helps moms breastfeed and improves the mother’s confidence as well as improving sleep for baby. The postpartum bed becomes a valuable part of supporting this closeness.

Even as moms are holding their babies longer, they still feel the effects of labor. Mom may be physically exhausted, on medication and sleep deprived. Falling asleep while holding a baby can result in an infant fall. A review on infant falls shows that when moms are taught to place babies back in the bassinet when they feel tired, infant falls are drastically reduced.

The design of the postpartum bed can help make those transfers easier and safer.

1. Healthy Birth Practice #6: Keep Mother and Baby Together - It’s Best for Mother, Baby & Breastfeeding, Crenshaw.
2. Fall Prevention in Our Healthiest Patients: Assessing Risk & Preventing Injury for Moms & Babies, Gaffey.
We owe them more than we can ever repay. VA medical centers have a long history of caring for those who protect our country. Giving our veterans excellent care at all the 144 VAs across the country is an important way we can give back to those who put their lives on the line for us.

Veterans are likely to need hospital care longer than other patients. The average age of a veteran receiving care at a VA facility is 60, and 91% are male. Many veterans suffer fatigue, pain and cognitive disturbances. Because of these complications, veterans are at a high risk of falling and sustaining injury from a fall.

To help protect our veterans and reduce the risks of falling, the nursing leaders at the VA have created a VA Falls Toolkit* that provides education on falls. VAs have a policy of reducing injury, as well as preventing falls, which is the goal of this toolkit.

---

*Implementation Guide for the Fall Injury Reduction, VA National Center for Patient Safety - Reducing Preventable Falls & Fall-Related Injuries
Hospitals are one place we hope a child never has to experience. Hospitalization can be highly stressful to children. The strange machines, busy people, odd sounds and smells feel threatening. Bright colors and cheery images could help with this anxiety. Evidence shows that when the hospital setting is attractive to the child, there is less anxiety and fear.

Because children are smaller than adults, every object in the room is relatively higher and heavier. Often, children’s falls are not just stumbles on the floor. The most common cause of falls in children (39%) is from falling or rolling off an object such as a bed or a crub. Falls should be as high of a concern in pediatrics as they are in every other hospital unit.

---

**Spirit Select youth inlay bed**

Additional features:

- **Customizable alarm tone**
  - Can play "Mary Had a Little Lamb" instead of alarm tone.

- **Minimum weight**
  - 45 lbs. helps support a smaller patient.

- **Customizable bumper lights**
  - The child can choose the color of the bumper lights.

- **Obstruction sensor**
  - Designed for safety under the bed.

- **Bed exit alarm**
  - Alerts you when your patient is too close to the siderail. Helps protect you and your patients from common alarm hazards such as false alarms, alarm desensitization and nonrestoration of settings.

- **Watchdog Bed Monitoring System**
  - Bed monitoring system. Visually alerts you when the bed has changed position.

- **Underbed nightlight**
  - Helps children feel more comfortable at night.

- **10.75-inch low height**
  - Helps shorter children get in and out of bed more easily.

- **Youth inlays**
  - The child can choose the color of the bumper lights.

- **High siderails**
  - Designed to provide safe siderail coverage.

---

5. The Impact of Creating a Child-Friendly Hospital Environment in Pediatric Cancer Patients & Their Families in Comprehensive Cancer Center at King Fahad Medical City, Hamdan 2016.
43.8 million adults suffer some form of mental illness every year. Recently, the US government has put greater emphasis on helping those living with mental illness. Although psychiatric patients require close monitoring, there has been a long-term, highly troubling trend in decreased caregiver-to-patient ratios. Psychiatric patients are often agitated and can cause harm to themselves or to caregivers. Also, the Joint Commission requires that no furniture in a patient room can be used as a barricade against the door, so that caregivers can enter and exit as needed.

For these reasons, psychiatric facilities often use platform beds to reduce the risk of self-harm. Some psychiatric patients need extra support, including geriatric patients, those at high fall risk, or patients who have medical complications, need a bed with specialized features.

Additional features
- Reduced cord length
- Tamper-proof hardware
- Spirit Platform Bed available for patients at highest risk of self-harm
- Nonremovable headboard
- Siderails comply with FDA’s monitored Entrapment Zones 1 – 4
- Automatic nightlight
- Allows patients to rest with the underbed light off but turns on when your patient starts to exit, illuminating the floor for surer foot placement.
- Integrated bed exit alarm
- Stops the bed from lowering onto any obstruction under the bed.
- Nonremovable footboard/litter deck
- Removable brake
- Allows the caregiver to remove the brake release when leaving the room so the patient isn’t able to move the bed.
- Obstruction sensor
- Restrictions all bed functions using a predetermined code, so that only the caregiver who knows the code can articulate the bed.
